

## **Cambridge International Examinations**

Cambridge International General Certificate of Secondary Education

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
PHYSICS			0625/63
Paper 6 Altern	ative to Practical	Oct	tober/November 2018
			1 hour
Candidates and	swer on the Question Paper.		

#### **READ THESE INSTRUCTIONS FIRST**

No Additional Materials are required.

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This syllabus is approved for use in England, Wales and Northern Ireland as a Cambridge International Level 1/Level 2 Certificate.

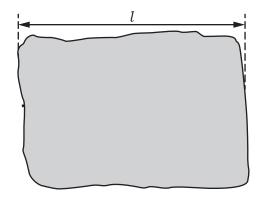

This document consists of 12 printed pages and 4 blank pages.

© UCLES 2018

1 A student is determining the density of modelling clay.

He is using the block shown in Fig. 1.1 and Fig. 1.2.

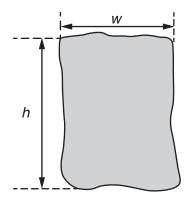

Fig. 1.1

Fig. 1.2 (side view)

(a)	(i)	Measure the dimensions of the block of modelling clay, as shown in Fig. 1.1 and Fig. 1.2
-----	-----	--

length $l = \dots$	 cm
width $w = \dots$	 cm
height h =	cm [1]

(ii) Calculate the volume  $V_1$  of the block, using your measurements from (a)(i) and the equation  $V_1 = l \times w \times h$ .

$$V_1 = \dots cm^3 [1]$$

**(b)** Suggest a possible source of inaccuracy in measuring the dimensions of the block and describe an improvement to the procedure that will produce more reliable measurements of the block.

suggestion	
improvement	
	[2]

(c) The student suspends the piece of modelling clay from a forcemeter, as shown in Fig. 1.3.

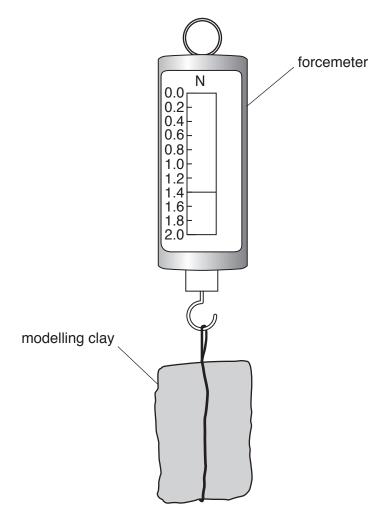

Fig. 1.3

Record the weight *W* of the block of modelling clay shown in Fig. 1.3.

$$W = \dots N[1]$$

(d) Calculate a value  $\rho_1$  for the density of the modelling clay, using your results from (a)(ii) and (c) and the equation

$$\rho_1 = \frac{W \times k}{V_1},$$

where  $k = 100 \,\mathrm{g/N}$ .

$$\rho_1$$
 = ......[2]

(e) The student pours some water into a measuring cylinder, as shown in Fig. 1.4.

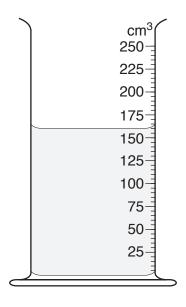

Fig. 1.4

(i)	Record the volume	$V_2$ of the water in the	measuring cylinde	r shown in Fig. 1.4.
<b>\-/</b>		.,		

$$V_2 = \dots \text{cm}^3 [1]$$

(ii)	Describe how a measuring cylinder is read to obtain an accurate value for the volume of
	water. You may draw a diagram to help you.

(f) The student lowers the modelling clay into the water, as shown in Fig. 1.5.

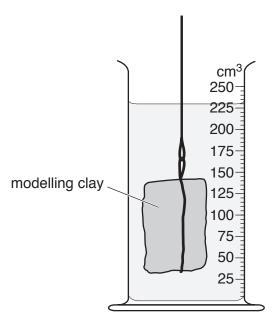

Fig. 1.5

(i)	•	Record the new reading $V_3$ of the measuring cylinder in Fig. 1.5, with the block of
		modelling clay in the water.

• Calculate another value  $\rho_2$  for the density of modelling clay, using your value for  $V_3$ , your readings from **(c)** and **(e)(i)** and the equation

$$\rho_2 = \frac{W \times k}{(V_3 - V_2)},$$

where  $k = 100 \,\mathrm{g/N}$ .

(ii) Suggest which of  $\rho_1$  or  $\rho_2$  is likely to be the more accurate value for the density of the modelling clay.

Justify your answer by referring to the procedure.

[Total: 11]

2 Some students are determining the resistance per unit length of wire X.

They are using the circuit shown in Fig. 2.1.

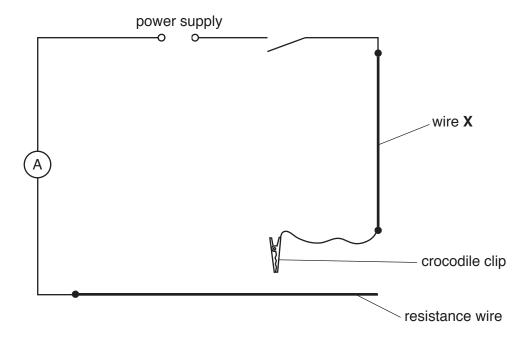

Fig. 2.1

The crocodile clip is connected to a length of the resistance wire. The current in the circuit and potential difference (p.d.) across wire **X** are measured.

- (a) On Fig. 2.1, draw the symbol for a voltmeter correctly connected to measure the p.d. across wire X.
- (b) A student adjusts the position of the crocodile clip until the current in the circuit is 0.80 A.

In Table 2.1, record the value of the p.d. *V* across wire **X**, as shown in Fig. 2.2.

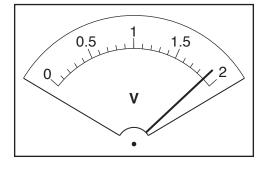

Fig. 2.2

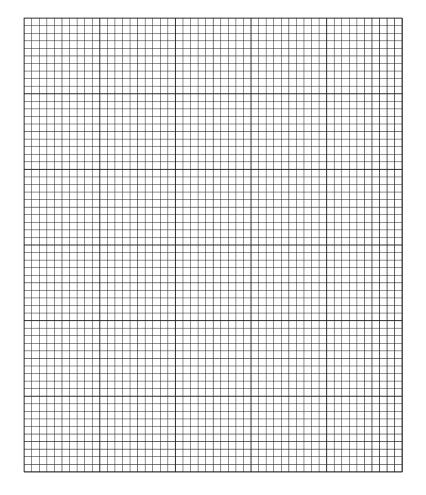

[1]

(c) The student records the p.d. V for different currents, as shown in Table 2.1.

Table 2.1

I/A	V/V
0.80	
0.70	1.58
0.60	1.34
0.50	1.03
0.40	0.81

(i) Plot a graph of V/V (y-axis) against I/A (x-axis).

[4]

(ii) Determine the gradient *G* of the graph. Show clearly on the graph how you obtained the necessary information.

 $G = \dots [1]$ 

(iii) Fig. 2.3 shows wire X.

Fig. 2.3

•	On Fig.	2.3,	measure	the	length	l.
---	---------	------	---------	-----	--------	----

• The wire in Fig. 2.3 is shown to  $1/3^{rd}$  scale. Calculate the actual length L of wire **X**.

L = ..... cm [1]

(iv) Calculate the resistance R of each centimetre of wire X, using the equation

$$R = \frac{G \times k}{L},$$

where  $k = 1.0 \Omega$  cm.

Give the value for *R*, to a suitable number of significant figures for this experiment.

 $R = \dots [2]$ 

(d) A student notices that the resistance wire becomes very hot when the crocodile clip is connected to short lengths of the wire.

Suggest an improvement that would help to reduce this effect.

[Total: 11]

**3** A student is investigating the reflection of light by a plane mirror.

Her ray-trace sheet is shown in Fig. 3.1.

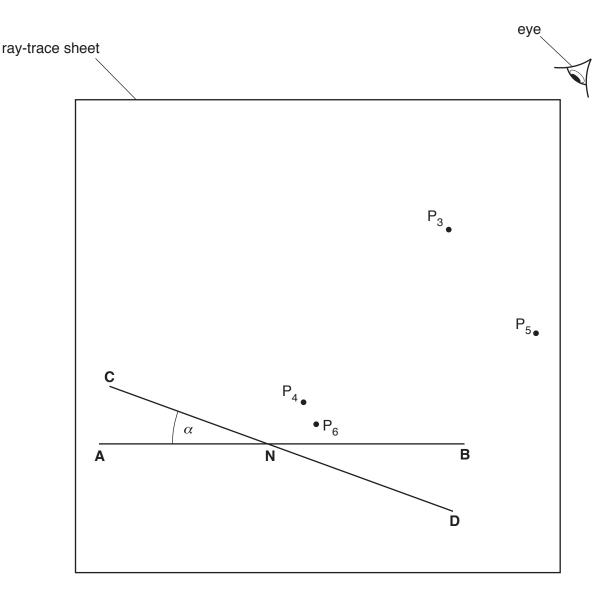

Fig. 3.1

- (a) (i) Measure and record in Table 3.1 the angle  $\alpha$  between **AN** and **CN**, as shown in Fig. 3.1.
  - (ii) Draw a normal to **AB** at point **N**, towards the top of the page. Label the top point of this normal **L**.
  - (iii) Two pins  $P_1$  and  $P_2$  are placed on line **LN**, a suitable distance apart for ray tracing. On Fig. 3.1, label suitable positions for  $P_1$  and  $P_2$ . [1]

(b)		The student places the reflecting surface of a plane mirror on line $\bf CD$ and views the images of $\bf P_1$ and $\bf P_2$ from the direction indicated by the eye in Fig. 3.1.					
	She places two pins $P_3$ and $P_4$ so that the images of $P_1$ and $P_2$ , and the pins $P_3$ and $P_4$ , all appear exactly one behind the other.				ιII		
	(i)	Draw a line pas	ssing through P <sub>3</sub> and	P <sub>4</sub> and rea	ching point	<b>N</b> . [1	1]
	(ii)		ngle $ heta$ between this liue in Table 3.1.	ne and the	normal <b>LN</b> .	[1	1]
			Tab	ole 3.1			
				α/°	θ/°		
			mirror on CD				
			mirror on <b>EF</b>	35			
(c)	Fig. The	3.1. student repeats				o <b>AN</b> . Line <b>EF</b> is not shown it ses pins $P_5$ and $P_6$ in line with	
	(i)	new images. Draw a line pas	ssing through ${\sf P}_{\sf 5}$ and	P <sub>6</sub> and rea	ching point	<b>N</b> . [1	1]
	(ii)		ngle $\theta$ between this nue in Table 3.1.	new line and	the normal	<b>LN</b> .	1]
(d)	) A student suggests that when the mirror is moved, the <b>change in</b> $\theta$ should be equal to twice the <b>change in</b> $\alpha$ .			е			
	State whether your readings support this idea. Justify your answer with reference to the readings.					е	
	statement						
	justification						
						[2	2]
(e)		gest two precateriment.	utions that you woul	ld take to e	nsure accu	rate results from this type o	)f

[Total: 11]

**4** A student is investigating the conduction of thermal energy by metals.

Plan an experiment to compare the rates at which different metals conduct thermal energy.

The apparatus available includes:

strips of different metals, shaped as shown in Fig. 4.1 a test-tube in a clamp stand a beaker a supply of cold water a supply of hot water.

Fig. 4.1

The shorter section of each strip of metal can fit inside a test-tube.

Write a plan for the experiment.

## You should:

- list any additional apparatus needed
- draw a labelled diagram of how the apparatus will be arranged
- explain briefly how you will carry out the experiment
- explain how the metals will be compared
- state the precautions which should be taken to obtain reliable results.
